

NEW LATTIX DESIGN TOOL KIT V2

SignPost Solutions have just launched a new version of their Lattix Design Tool Kit. Version 2 is powered by 'SIGNLOAD' from Buchanan Computing and as with the original version is extremely user friendly.

Important additional features on V2 are foundation design (including embankments), single and multiple mast configuration design, optional wind load parameters (general or site specific), updated mast capacities and the inclusion of the NEW Lattix 4412 'Mini Mast'.

We have even added a steel post design facility for sites where passive safety is not a requirement.

For a demonstration of this fantastic FREE design programme please contact Ian Thomas or Tim Daly at SignPost Solutions on 0121 506 4770
