

News Letter – November 2009

The resource site for Traffic Signal and ITS practitioners.

DfT have produced a new guidance note detailing issues surrounding NRSWA **Street Works Qualifications**, useful information to ensure your contractors or operatives are compliant with the requirements to demonstrate competence on site. Find it in the **Standards Section** under Miscellaneous items.

Superseded standards have also been added to the **Standards** section – see [details below](#).

Standards

We have started to include a series of superseded standards in a new sub-category in the **Standards** section of the web-site. This valuable reference resource enables practitioners to refer to relevant standards for legacy installations. This will be an on-going activity, but plan to be adding more of these imminently.

Gallery

Remember to take the opportunity to visit our **Gallery** section next time you are on the site, we have many items for you to look at or download, including the November issue of the desktop calendar for your computer.

Industry Directory

We would like to welcome a number of new companies to our **Industry Directory** pages. Please feel free to contact us to discuss how we can assist your company both on the web-site and as part of the popular nationwide UKRoads Roadshow events.

UKRoads Shop

Check out the new additions to our range of merchandising, including the current item of the week – The Equestrian **Pass Wide and Slow** design

Brought to you by www.ukroadsignals.com, the Traffic Signal and ITS resource site.
