

## NATIONAL PASSIVE SAFETY CRASH DEMONSTRATION DAY

*In association with*

**Traffex**

**MIRA**

***Have you ever wondered how a vehicle performs when it collides with a forgiving structure at over 70mph? Or witnessed for yourself the life-saving capabilities of passively safe, crash friendly street furniture?***

***Well now you can!*** On **30<sup>th</sup> June 2011** UK Roads will be holding a national passive safety Crash Demonstration Day. As in previous years, this unique, exciting and informative event is taking place at the Highway and Vehicle Outdoor Crash (HAVOC) facility at **MIRA** near Nuneaton, Warwickshire.

This year our ***live crash demonstrations*** will feature:

- Tau Crash Cushion (Highway Care) – ***High speed impact***
- Composite frangible sign post (FSP) – ***High speed impact***
- Aluminium lighting column (SAPA) – ***Side-on impact***
- Traditional steel lighting column – ***Side-on impact***
- And much more...

Demonstrations of other products and services compatible with roadside passive safety will also take place outside, adjacent to the crash area. This event is endorsed for CPD certificates by both the CIHT and the IHE. To book your place please email us at [info@ukroadsltd.com](mailto:info@ukroadsltd.com)

Places are **FREE** but are strictly only available in advance. Admission to MIRA's premises will only be granted to those whose booking has been confirmed as there are a number of security measures to which all organizers, exhibitors and attendees will have to adhere.

Places are limited and these events are often over-subscribed, so you are advised to book early to avoid disappointment.
